

AMAZON / CPSC RECALL MATCHING

Amazon matched your ASIN. Does the CPSC recall cover your inventory?

A practical evidence guide for comparing the live recall notice, the product in hand and every unit under restriction.

The short answer

An ASIN is a marketplace identifier. The recall covers physical products that satisfy the current official criteria.

Challenge the match only when the evidence excludes every restricted unit - or a batch you can prove is uniform - from every applicable path in the notice.

01 IDENTIFY

Capture the exact Amazon action, child ASIN, cited safety action, case ID and deadline.

02 TEST

Compare the current notice with permanent identifiers on the same physical product and package.

03 TRACE

Connect that identity to every unit or documented uniform batch under restriction.

04 DECIDE

Covered: stop and remedy. Outside: request review. Unknown or mixed: keep on safety hold.

WHAT THIS CHANGES IN PRACTICE

COVERED - stop sale and shipment; isolate stock and follow the remedy.

PROVABLY OUTSIDE - keep the active restriction in place while requesting review through the current Amazon control.

UNRESOLVED OR MIXED - hold the stock and rebuild identifier-level traceability.

The guide tests coverage of documented seller-owned stock. It does not establish what another seller holds or guarantee an ASIN-level catalog change.

Separate four records before arguing mismatch

The flag, the catalog record, the seller's stock and the official recalled population answer different questions.

An ASIN-level restriction can be broader than a recall's unit-level scope. Evidence about your stock does not prove what other sellers hold.

Preserve the case. Then find the exact action.

Do not edit identifiers before saving the historical record. Search tools locate the action; the current notice defines it.

LANE A / PRESERVE BEFORE CHANGE

- 01 Save the complete notification**
Classification, cited action, response control and deadline.
- 02 Freeze catalog history**
Child ASIN, brand, model, GTIN, variation, size and pack count as flagged.
- 03 Capture the inventory snapshot**
SKU/FNSKU, quantities, receipts, FC status and stranded reason.
- 04 Preserve the exchange**
Case ID, every submitted file and Amazon's full response.

EXPANSION CHECK

A later expansion can invalidate an earlier repair mark. The 2024 BLACK+DECKER expansion included units repaired under the earlier action. [S13]

LANE B / VERIFY THE SOURCE

- 05 Open the individual CPSC notice**
Search the cited number, then product, maker, model and identifiers.
- 06 Check expansions and firm sources**
Read tables, images, captions, code locations, remedy and official eligibility tools.
- 07 Resolve conflicts before exclusion**
If official sources conflict, hold stock and obtain identifier-specific clarification.

SOURCE CONTROL

Use the CPSC database and API for discovery - not as negative proof. Criteria may appear only in the live notice, an image or the manufacturer's page.

Read the notice as a coverage test

The title names a product family. The body supplies the criteria that include or exclude a physical unit.

A missing or unreadable code is unknown - not outside the recall.

Fabuloso 23-115: what the official record establishes

This case is useful because UPC, lot range, variant and country-related exclusions all matter. [S06-S07]

PUBLISHED COVERAGE STRUCTURE

17 affected U.S. UPCs

A listed UPC is required for coverage of the U.S. products described on the official manufacturer page.

Two first-eight lot-code ranges

2348US78-2365US78

3001US78-3023US78

Country and named-product exclusions

The page excludes Made in Mexico / MX-coded products and identifies additional product and purchase-date exclusions specific to this recall.

WHAT IT ESTABLISHES

Official criteria

Which UPCs, lot ranges and exclusions must be tested against the physical bottle and packaging.

A verified required UPC outside the list can exclude that bottle - if no other path covers it.

WHAT IT CANNOT ESTABLISH

Seller inventory

The official notice does not prove which UPC or lot appears on a seller's units, how an outer pack maps to retail bottles, or whether every restricted unit is identical.

The inventory link must come from same-unit photographs and traceability records.

SOURCE RECORD

S06 - U.S. CPSC Recall 23-115 | S07 - Fabuloso official recall page | Accessed 2026-08-15

Excerpt typeset for readability. Numeric identifiers are reproduced as evidence fields; surrounding explanations are editorial paraphrase.

[Open S06 - CPSC notice](#)

[Open S07 - manufacturer page](#)

Two mismatch theories. Two different proof chains.

The public seller threads identify plausible leads. Neither publishes enough evidence to establish an Amazon error. [S08-S09]

SCENARIO A

Different physical UPC

ASIN B0FSLM7P8L
Seller-stated UPC 035000800015

PUBLIC LEAD

The stated UPC does not appear in the official 17-item U.S. list.

MISSING LINK

No public unedited same-unit UPC photograph, pack mapping or stock-wide identity record.

NARROW CONCLUSION

Investigate mismatch; the published record does not prove one.

UNRESOLVED

SCENARIO B

Same product, outside lot

Seller-reported code 5270US781L
First eight: 5270US78

PUBLIC LEAD

The reported first eight characters fall outside both official ranges.

MISSING LINK

The attachments are not public and the thread does not establish that every restricted unit came from that lot.

NARROW CONCLUSION

An outside lot may exclude those units; the stock-wide result remains unproved.

UNRESOLVED

Different claim -> different proof: identity evidence for the UPC theory; production-code evidence plus inventory traceability for the lot theory.

Build one identity crosswalk

Put Amazon's catalog data, the markings on the product and the recall criteria side by side.

Finding vocabulary: MATCH / PROVES EXCLUSION / DIFFERENT - NOT DECISIVE / CONTRADICTION / UNVERIFIED / NOT USED. Inventory: COMPLETE / MIXED / UNVERIFIED.

IDENTITY FIELD	CATALOG / OFFER	PHYSICAL EVIDENCE	OFFICIAL TEST	FINDING
Brand + type	Child title; brand	Whole product; permanent mark	Named product family	Match / contradiction / unverified
Model / variant	Model; scent; size	Permanent model or variant	Listed row or variant	Match / exclusion / non-decisive
UPC / GTIN	Catalog GTIN; pack	Retail + outer codes separated	Listed UPC, if material	Match / exclusion / contradiction
Serial / lot / date	Often absent	Full code + location on same unit	Range, prefix or window	Match / exclusion / unverified
Package / configuration	Offer configuration	Product and package together	Only if notice limits scope	Match / exclusion / support
Repair / exclusion mark	Catalog claim, if any	Recognized mark + record	Still accepted by current notice	Exclusion / contradiction / unverified
Inventory population	Qty; receipts; locations	Census or documented uniform batch	Applied to each unit / batch	Complete / mixed / unverified

The last row is decisive: a correct finding for one photographed unit is not yet a conclusion about all restricted stock.

Extend the unit finding across the restricted stock

One unaffected sample cannot represent mixed receipts, lots or fulfillment locations.

Decide the safety outcome before submitting anything

The evidence determines the route. The marketplace flag does not define federal scope, and a mismatch theory cannot bypass a covered recall.

LEGAL BOUNDARY

Federal law generally prohibits selling, offering for sale or distributing a product covered by a qualifying corrective action, subject to statutory exceptions. CPSC tells online sellers to stop selling recalled products. [S01, S14]

FINDING

COVERED

STOP SALE + SHIPMENT

Isolate inventory and follow the official remedy and Amazon instruction.

STOP CONDITION

Never use a mismatch submission to bypass coverage.

FINDING

PROVABLY OUTSIDE

REQUEST REVIEW

Keep the active restriction in place while submitting the traceable non-coverage case.

STOP CONDITION

Any unresolved path, conflicting identifier or untraced stock.

FINDING

UNRESOLVED / MIXED

SAFETY HOLD

Do not sell or ship. Rebuild traceability or obtain identifier-specific clarification.

STOP CONDITION

Do not claim exclusion while a relevant unit remains unknown.

OFFICIALLY REPAIRED OR REWORKED

Do not resume sale without a current authorized repair record and the distinguishing mark recognized by the current notice. Re-check later expansions.

SEPARATE QUESTION | Exclusion from one recall is not a general safety clearance. A separate defect or serious-risk signal may require its own Section 2064(b) analysis. [S02]

Build the packet in the same order as the proof

A large packet is not necessarily strong. Every item should answer a defined question.

EVIDENCE HIERARCHY

01 AUTHORITATIVE SCOPE

Current CPSC notice, expansions and official manufacturer criteria.

02 DIRECT UNIT IDENTITY

Contextual same-unit photos: whole product, permanent label, UPC and variable code.

03 POPULATION + TRACEABILITY

Census or documented uniform batch tied to receipts, SKU/FNSKU and quantity.

04 AUTHORITY + PROCESS

Specific manufacturer determination and the current Amazon request, when applicable.

05 SUPPORTING CONTEXT

Catalog history, GS1, generic invoice or test record - useful only for what it proves.

SUBMISSION SEQUENCE

01

Cover: child ASIN, recall, notification and case ID

02

Current notice, expansions and official firm source

03

One-page identity crosswalk with decisive field

04

Same-unit photographs in a clear sequence

05

Census or batch-level traceability records

06

Specific manufacturer document Amazon requested

07

Notification, inventory actions, deadlines and history

08

Short explanation resolving the one contradiction

PROOF DISCIPLINE | A GS1 record proves GTIN allocation, not a production lot. A generic invoice proves purchase, not inventory uniformity. A letter cannot cure an unreadable or untraced code.

Follow the current Amazon notification

Separate the factual coverage question from Amazon's operational process. Dated forum guidance is context, not a universal workaround.

SIX GAPS GROUPED FOR RECOVERY

NEVER BYPASS THE RESTRICTION | Do not create a replacement ASIN, change identifiers, relabel stock, invent a repair mark, reuse another batch's photographs or continue FBM shipping.

Amazon sources: S09-S12. Complete workflows may require authentication in the restricted account.

Before you submit a mismatch case

A checked box means the record is present and reconciled - not merely mentioned in the cover note.

A / ACTION + SOURCE

- ☐ Exact child ASIN, case ID, classification, cited action and deadline preserved.
- ☐ Current individual notice opened; product, firm and identifiers independently searched.
- ☐ Every relevant expansion and official manufacturer source checked as of the review date.

B / PHYSICAL IDENTITY

- ☐ Full product, permanent label, code location, UPC and variable code shown on the same unit.
- ☐ Outer-pack and retail-unit identifiers separated and mapped to the actual offer configuration.
- ☐ Each claimed difference defeats a required criterion; non-decisive differences are labeled as such.

C / INVENTORY TRACEABILITY

- ☐ Restricted quantity reconciled by SKU/FNSKU, receipt, location and every variable lot or serial group.
- ☐ A 100% census is used where identity varies; any batch shortcut is supported by uniformity records.
- ☐ No inaccessible, unreadable, conflicting or mixed segment is described as outside the recall.

D / OUTCOME + SUBMISSION

- ☐ Covered units are stopped and routed to the remedy; unresolved units remain on safety hold.
- ☐ Packet follows the proof order and includes any specific signed manufacturer document requested.
- ☐ Current Amazon control is used; the explanation resolves the stated contradiction and preserves deadlines.

READY ONLY IF

Every applicable path is defeated for every unit or documented uniform batch - and the active Amazon instruction is being followed during review.

If any box fails, use the stop/hold route shown on page 11 before revising the case.

Sources and method

Official records define scope. Seller threads show reported facts and process context only; unresolved outcomes remain labeled unresolved.
