

AMAZON.COM / BUTTON-CELL COMPLIANCE

UL 4200A rejected. Which evidence link failed?

DOCUMENT ID

RI-GDE-AMZ-006

SOURCE

16 CFR Part 1263 + current Amazon guidance

SCOPE

Products actually using button or coin batteries

REVIEWED

August 7, 2026

Trace one exact product through identity, laboratory status, report coverage, GCC/CPC content, physical evidence, catalog data, and the live ASIN action before paying for retesting.

RI GUIDE · AUGUST 2026 · VERSION 1.0

VERSION, SCOPE, AUDIENCE, PERMANENT LINKS, AND RIGHTS

Document control

Use this sheet to identify the exact guide, the controlling article, and the route through the audit.

DOCUMENT ID	RI-GDE-AMZ-006	VERSION / STATUS	1.0 / CURRENT
PUBLISHED	August 7, 2026	LAST REVIEWED	August 7, 2026
JURISDICTION	United States / Amazon.com	AUDIENCE	Amazon sellers, importers, private-label operators, compliance teams
CANONICAL ARTICLE	https://polandoc.com/amazon-ul-4200a-report-rejected/	PDF FILE	https://polandoc.com/wp-content/uploads/2026/08/amazon-ul-4200a-rejection-evidence-audit.pdf
AMAZON COLLECTION	https://polandoc.com/amazon-marketplace-compliance-guides/	KNOWLEDGE LIBRARY	https://polandoc.com/knowledge-library/

01 / FREEZE Fix the exact ASIN, product, revision, and request.	02 / VERIFY Check the lab, report, certificate, and visible evidence.	03 / DECIDE Choose only the remedy that fixes the identified gap.	04 / PRESERVE Record what changed, what was sent, and when.
---	---	---	---

SCOPE Products that actually contain or are designed to use a button cell or coin battery. Misclassified products belong in the separate scope guide.	LIMITATIONS Educational information, not legal advice, product testing, certification, accreditation, or an Amazon compliance decision.
---	---

ONE WORD, FOUR SEPARATE DECISIONS

A passing report is not an Amazon approval

Separate competence, sample testing, legal certification, and marketplace acceptance before diagnosing the rejection.

01

ISO/IEC 17025 accreditation

Recognizes laboratory competence, impartiality, and consistent operation for activities within the accredited scope.

Does not: certify the product, prove ASIN identity, or guarantee Amazon acceptance.

DECISION OWNER
Accreditation body

02

UL 4200A test report

Records results for the sample, method, edition, conditions, and limitations identified in the report.

Does not: automatically cover every ASIN, private-label model, bundle, or later revision.

DECISION OWNER
Testing laboratory

03

GCC or CPC

Is the finished-product certifier's legal certification for the identified product and applicable CPSC-enforced requirements.

Does not: make the laboratory the certifier merely because it tested the sample.

DECISION OWNER
Finished-product certifier

04

Amazon acceptance

Is an ASIN-specific marketplace evidence decision for the current compliance request and route.

Does not: replace federal certification obligations or operate as a government certificate.

DECISION OWNER
Amazon

The practical rule

A passing result can coexist with a rejection when product identity, certificate content, laboratory status, physical evidence, catalog data, file delivery, or the live request does not match.

START WITH ONE EXACT SOLD CONFIGURATION

Freeze the product before auditing the documents

The package cannot be reconciled until one ASIN, one variation, one physical product, and one current request are fixed in the record.

Evidence chain

01

IDENTITY TEST

[] PROCEED

[] REVIEW

[] MISSING INFORMATION

Decision prompt:

Can the same exact product identity be traced across every record without seller-made edits or unsupported family assumptions?

PUBLIC PACKAGE, LIVE ASIN-SPECIFIC ROUTE

Check eight connected controls

A complete package is a chain. Mark each control against the current product and current request.

01	Accredited report. A report addressing 16 CFR Part 1263 and ANSI/UL 4200A from the relevant ISO/IEC 17025-accredited laboratory and site.	[[[]]]
02	Certificate. The requested GCC is reconciled with the legally correct GCC/CPC type for the finished product.	[[[]]]
03	Visible evidence. Product, package, warnings, instructions/manual, model or part number, and all required sides are shown.	[[[]]]
04	Results. Each applicable control shows Pass or Not applicable, not Fail, Not compliant, or a blank.	[[[]]]
05	Original files. Reports and certificates are complete, readable, unmodified originals.	[[[]]]
06	Laboratory status. The laboratory is not shown as temporarily suspended or otherwise unavailable for the current Amazon route.	[[[]]]
07	Sample match. Current physical images clearly connect the sold product to the item tested.	[[[]]]
08	Catalog alignment. Model, part or item number, variation, and battery attributes agree with the product and documents.	[[[]]]

STATUS KEY

PROCEED / REVIEW / MISSING
INFORMATION

BUNDLE RULE

Use separate evidence for each included
item where required.

ROUTE BOUNDARY

The signed-in action controls fields,
attachments, and provider options.

ENTITY, SITE, DATES, SCOPE, AND PLATFORM STATUS

Verify the laboratory before relying on the report

An accreditation logo is not enough. Record the exact evidence that supports each control.

ID	CONTROL	EVIDENCE REVIEWED / RECORD	STATUS
01	Legal entity Exact name shown on report and accreditation record.		☐ P ☐ R ☐ M
02	Actual testing site Location that performed the relevant work.		☐ P ☐ R ☐ M
03	Status and dates Accreditation active for the test dates.		☐ P ☐ R ☐ M
04	Relevant scope Scope supports the claimed testing activity.		☐ P ☐ R ☐ M
05	Accreditation body Directory and recognition trail verified.		☐ P ☐ R ☐ M
06	Subcontracting Any external work is disclosed and supported.		☐ P ☐ R ☐ M
07	Report authenticity Number, issuer, signatures, and amendment history checked.		☐ P ☐ R ☐ M
08	Amazon status Current suspension or restriction information checked.		☐ P ☐ R ☐ M

Federal boundary. CPSC acceptance is relevant to children's-product third-party testing. It is not identical to ISO/IEC 17025 accreditation.

Marketplace boundary. A laboratory can support federal testing and still fail Amazon's current accredited-report or platform-status requirement.

CHECKED BY / DATE

OWNER: _____

DATE: _____

CASE / ASIN: _____

FILE INTEGRITY + TECHNICAL IDENTITY AND COVERAGE

Audit the complete report without editing it

The report must be both an intact controlled document and a legitimate technical basis for the product now being sold.

A / File integrity

- ☐ Report number and issue date
- ☐ Complete page count
- ☐ Readable original file
- ☐ Signatures or authorization where applicable
- ☐ Amendments and superseded pages controlled
- ☐ No seller-added model, ASIN, page, signature, or result
- ☐ No password, corruption, missing page, or broken attachment
- ☐ Original and submitted filenames recorded

B / Identity and coverage

- ☐ Laboratory and actual testing site
- ☐ Client and manufacturer
- ☐ Sample receipt and test dates
- ☐ Product, model, and revision
- ☐ Supported variations and construction
- ☐ Battery type, count, location, and access method
- ☐ Sample and report photographs
- ☐ Cited standard and edition
- ☐ Every applicable result, N/A, deviation, and limitation
- ☐ Subcontracted work identified

EDITION RECONCILIATION	RECORD	FINDING
CFR-incorporated edition	16 CFR §1263.3 record checked	
Report edition	Exact designation stated in report	
Current Amazon/provider wording	Exact live request or provider term captured	

Coverage decision:

Does the report legitimately cover the exact model, revision, relevant construction, and variation now being sold?

☐ Yes
 ☐ No
 ☐ Unknown

FINISHED-PRODUCT CERTIFIER, DOCUMENT TYPE, AND REQUIRED CONTENT

Audit the GCC or CPC as a separate legal record

The test report supplies evidence. The finished-product certifier issues the certificate for the identified product.

01	Finished product identification precise enough to connect the certificate to one product.	[] P [] R [] M
02	Applicable requirement citations for each rule, ban, standard, or regulation being certified.	[] P [] R [] M
03	Finished-product certifier with the current required name and contact information.	[] P [] R [] M
04	Records custodian and current contact information for test records.	[] P [] R [] M
05	Date and place of manufacture for the certified finished product.	[] P [] R [] M
06	Date and place of testing forming the certification basis.	[] P [] R [] M
07	Testing entity or laboratory information plus the current required attestation/content.	[] P [] R [] M

CERTIFIER Determine the finished-product certifier under 16 CFR §1110.7. The laboratory is not automatically the certifier.	DOCUMENT TYPE General-use product: GCC. Children's product: CPC based on the applicable testing rules.	PRODUCT COVERAGE Apply §1110.13 and identify the covered product precisely. Do not manufacture family coverage.
---	--	---

Amazon wording vs legal classification:

Current public button-cell guidance names a GCC. If the product is legally a children's product, do not relabel a CPC or create a legally inaccurate GCC. Use the route available for that ASIN to resolve the document path.

ONE PRODUCT MUST REMAIN RECOGNIZABLE ACROSS EVERY SURFACE

Match what the user, lab, and marketplace can see

Compare the model, revision, battery configuration, warnings, and variation across all eight evidence surfaces.

01 / SOLD ITEM Physical product Model, revision, battery access, construction, markings.	02 / RETAIL Retail package Product identity, included contents, warnings, package revision.	03 / HAZARD Product warning Required location, legibility, permanence, current physical item.	04 / INSTRUCTIONS Manual Battery instructions, warnings, model/revision alignment.
05 / INCLUDED ITEM Battery or remote Separately included battery, accessory, remote, or spare.	06 / TEST RECORD Report photos Sample identity, construction, markings, and test configuration.	07 / CURRENT PROOF Seller photos Exact inventory, variation, package, all required sides.	08 / DIGITAL RECORD Catalog data ASIN, model, part/item number, variation, battery attributes.

CROSS-MATCH CONTROL	FINDING / EVIDENCE FILENAME OR PAGE	STATUS
Model and revision		[] P [] R [] M
Battery configuration		[] P [] R [] M
Warnings and instructions		[] P [] R [] M
Exact variation and bundle content		[] P [] R [] M

Guardrail: Renders, altered warnings, and images from another variation do not prove current inventory. New photographs cannot cure a technical difference between the product tested and the product sold.

USE THE WORDING TO CHOOSE A DIAGNOSTIC LAYER, NOT A CONCLUSION

Decode the rejection before choosing the fix

The message can indicate where to begin. It rarely proves the final root cause by itself.

WORDING PATTERN	LAYER	FIRST CHECK	DO NOT INFER
"Not the documents required"	Requirement / file mapping	Exact live request, accepted document type, attachment field, and submitted filename.	That the product failed testing.
"GCC missing required information"	Certificate	Seven content controls, finished-product certifier, citations, product identity.	That a second test is automatically required.
"Format unable to accept"	Delivery / file integrity	Open the file, verify page count, size, password, corruption, and allowed format.	A technical non-compliance finding.
"Product does not match detail page"	Identity / catalog	Model, revision, variation, battery data, current physical photos, report sample.	That accurate catalog data should be changed to create a false match.
Generic "non-compliant" or repeated checklist	Full evidence chain	Freeze the request, mark every layer, and request the specific deficient item where the route allows.	A hidden algorithm, laboratory fraud, or a confirmed root cause.

MESSAGE Copy the exact wording. Do not paraphrase away the diagnostic clue.	CONFIGURATION Record ASIN, model, request ID, current action, due date, and available fields.	CASE EVIDENCE Seller cases document patterns only. They do not prove the final cause in another case.
---	---	---

Recovery rule: Diagnose the defect. Do not resend the same explanation and files without recording a specific missing or corrected fact.

EVIDENCE DETERMINES THE ROUTE

Choose the remedy that fixes the identified layer

Move down the route. A generic rejection is not evidence that retesting is the right first action.

01	Is the live catalog factually wrong while the physical product and controlled documents agree?	YES	Make a truthful catalog correction and preserve before/after records.
02	Is the correct physical product sold but the image packet is incomplete, unreadable, rendered, or from another variation?	YES	Create a new physical-image packet for the exact sold configuration.
03	Does the existing test basis cover the product but the GCC/CPC has a certificate defect?	YES	Have the finished-product certifier issue a corrected GCC or CPC.
04	Is there an administrative or identity error supported by the laboratory's controlled sample records?	YES	Request an official laboratory amendment or clarification.
05	Can the report not legitimately cover the current model, revision, construction, variation, or required testing?	YES	Retest the exact product through the appropriate laboratory route.
06	Is the only evidence a generic rejection and no unsupported layer has been identified?	YES / UNKNOWN	Do not order another test yet. Complete the audit and identify the gap.

The live ASIN action controls whether the available route is document submission, appeal, or provider-led testing/validation. No route guarantees acceptance.

USE WHEN / OWNER / DOES NOT FIX

Know the boundary of each corrective action

A remedy is useful only when its owner has evidence that it addresses the identified defect.

Truthful catalog correction Use when Current catalog facts are wrong while the sold product and controlled documents agree. Owner Seller / catalog owner. Does not fix A report that tested another construction or revision.	New physical-image packet Use when The exact sold product is correct but the visible proof is weak, incomplete, or from another variation. Owner Seller / evidence owner. Does not fix A technical mismatch between tested and sold product.
Corrected GCC or CPC Use when The test basis covers the product but the certificate type, issuer, content, citation, or identity is defective. Owner Finished-product certifier. Does not fix Missing or inapplicable testing.	Official lab amendment Use when A genuine administrative error or identity clarification is supported by controlled laboratory records. Owner Testing laboratory. Does not fix An untested model, construction, or unsupported variation.
Retest Use when The existing report cannot legitimately cover the current product or required testing is missing. Owner Appropriate competent laboratory. Does not fix False catalog data, poor images, upload failure, or a certificate-only defect.	Pause and identify the gap Use when The rejection is generic and the audit has not established which layer is unsupported. Owner Compliance record owner. Does not fix Nothing by itself; it prevents an unsupported or wasteful action.

CHOSEN ROUTE OWNER: _____ EVIDENCE: _____ CHANGE STATEMENT: _____

CAPTURE, VALIDATE, SUBMIT, PRESERVE

Build a controlled resubmission record

The live action attached to the affected ASIN controls the actual route. Preserve enough evidence to reconstruct what changed.

01

Capture the request

1. Save the original notice and exact rejection wording.
2. Record marketplace, ASIN, request/case ID, due date, and every action shown.
3. Capture full-page screenshots of the panel, attachment fields, and provider options.
4. Preserve original report and certificate source files without overwriting them.

NOTICE / DATE

ASIN / CASE ID

DUE DATE / ACTION

02

Validate the package

1. Open every file independently.
2. Confirm page count, readability, signatures/authorization, and no password or corruption.
3. Use clear filenames without changing document content.
4. Keep any permitted cross-reference index separate from the laboratory report.

FILES / VERSIONS

PAGE COUNTS

VALIDATION OWNER

03

Submit + preserve

1. Use only the current action offered: submission, appeal, or approved provider route.
2. Save confirmation, timestamp, filenames, versions, and any provider/test request ID.
3. Record the response.
4. State the exact difference between the rejected package and the new submission.

SUBMITTED AT

CONFIRMATION / PROVIDER ID

EXACT CHANGE

Do not promise: a universal click path, report-age rule, provider route, human review, review time, escalation outcome, or acceptance.

BEFORE ANOTHER SUBMISSION OR TEST ORDER

Make the decision from the completed record

Proceed only when the package shows what was wrong, what was corrected, and why the selected route addresses it.

GO only when

- ☐ The exact ASIN, variation, model, revision, battery configuration, and request are frozen.

- ☐ Laboratory entity, site, dates, scope, report authenticity, and Amazon status are checked.

- ☐ The complete original report is mapped to the product now being sold.

- ☐ Edition differences are documented rather than assumed.

- ☐ The correct GCC/CPC type, certifier, content, and product coverage are confirmed.

- ☐ All eight evidence surfaces tell one truthful product story.

- ☐ The live ASIN route and allowed fields are captured.

- ☐ The new submission differs from the rejected package in a specific, recorded way.

NO-GO guardrails

- 01** Do not use a report for another model, revision, brand, or unsupported variation.

- 02** Do not treat an accreditation logo as proof of scope, site, authenticity, or Amazon eligibility.

- 03** Do not call a report, UL certification, GCC/CPC, and Amazon approval the same thing.

- 04** Do not use renders or digitally altered warnings as current-product photographs.

- 05** Do not remove truthful battery information from the listing.

- 06** Do not repeat an unchanged package without identifying the unresolved gap.

- 07** Do not claim an algorithm, fraud, or hidden cause without evidence.

- 08** Do not assume every report expires after 12 months.

- 09** Do not make seller edits inside a controlled laboratory report.

Final decision: ☐ PROCEED ☐ REVIEW ☐ MISSING INFORMATION Owner: _____ Date: _____
